## Monthly ambient air quality snapshot for India

*September 2024*

# Key highlights

- **Compliance:** In September 2024, [260 out of 264](#) cities with more than 80% of the days with CAAQMS data available, recorded PM<sub>2.5</sub> concentrations below India's NAAQS of 60 µg/m<sup>3</sup>. 44 cities complied with the WHO's daily safe guideline concentration of 15 µg/m<sup>3</sup>.
  - **NCAP cities:** The monthly average PM<sub>2.5</sub> levels in 90 NCAP cities (out of 97 cities with more than 80% of days with data) surpassed the WHO's daily guideline for PM<sub>2.5</sub>, while 95 cities met India's daily NAAQS.
  - **Non-NCAP cities:** Among the 167 non-NCAP cities with over 80% of days with CAAQMS data, 130 cities reported monthly average PM<sub>2.5</sub> levels above the WHO daily guideline. 165 cities adhered to the daily NAAQS.
  - **The number of cities exceeding daily WHO standards rose to 220 in September, up from 177 in August , as the monsoon has ended.**
- **AQI category:** In September 2024, the number of cities with “Good (0-30 µg/m<sup>3</sup>)” air quality dropped to 201 from 218 in August. The number of cities with “Satisfactory (31-60 µg/m<sup>3</sup>)” air quality increased from 26 to 59. Additionally, 4 cities experienced “Moderate (61-90 µg/m<sup>3</sup>)” air quality in September, compared to just 1 city in August. **Overall, September saw a slow transition from the “Good” to the “Satisfactory” category, largely attributable to shifts observed in the states of Haryana, Uttar Pradesh, and Rajasthan within the Indo-Gangetic Plain.**
- **Delhi:** Delhi recorded an average concentration of 43 µg/m<sup>3</sup> in September, with 9 days in the “Good” category, 16 days in the “Satisfactory” category, 4 days in the “Moderate” category, and 1 day in the “Very Poor (121-250)” category. This is higher than August's average of 27 µg/m<sup>3</sup>, when there were 24 days in the “Good” category and 7 days in the “Satisfactory” category.
- **Cleanest city:** Aizawl, in the state of Mizoram, was the cleanest city in India during September, with monthly average PM<sub>2.5</sub> of 3 µg/m<sup>3</sup>.
  - The top 10 cleanest cities comprise four cities from Karnataka, two from Maharashtra, and one city each from Mizoram, Sikkim, Tamil Nadu, and Bihar.
  - Chikkamagaluru in Karnataka made its first appearance in the top 10 cleanest cities list.

- **Most polluted city:** **Byrnihat in Assam/Meghalaya ranked as the most polluted city in India in September 2024**, recording a monthly average PM<sub>2.5</sub> concentration of 73 µg/m<sup>3</sup>, surpassing the daily National Ambient Air Quality Standards (NAAQS of 60 µg/m<sup>3</sup>) 57% of the days in the month.
  - Byrnihat has consistently ranked among the top 10 most polluted cities every month this year, and this is the sixth time it has claimed the top spot for highest pollution levels.
  - Chittorgarh city in Rajasthan made its debut in the top 10 polluted list in September 2024.
  - **Among India's top 10 polluted cities, two cities each were located in Uttar Pradesh, Bihar, and Rajasthan and one city each from Tamil Nadu, Maharashtra, Assam, and Punjab.**
- **Frequency in top 10 polluted cities:** **A total of 67 cities were featured in the daily top 10 most polluted cities list in September 2024.** Of these, 26 cities made an appearance at least five times over the 30-day period, topped by Byrnihat in Assam/Meghalaya, which featured the most times (17 days), followed by Jalna (17 days), Sri Ganganagar (15 days), Mandi Gobindgarh (14 days), Nandesari (13 days), Ghaziabad (12 days), and Gummidipoondi (11 days).
- **NCAP:** **Only 25 out of the 67 cities featured in the daily top 10 most polluted cities list during September 2024 are part of the National Clean Air Programme (NCAP).** The remaining 43 have no action plan to reduce hazardous air pollution concentrations.
- **Megacities:** With the exception of Delhi, all other megacities, such as Chennai, Mumbai, Kolkata, and Bangalore, saw all their days in September falling within the 'Good' and 'Satisfactory' category.
- **Monitoring infrastructure:** **One new continuous ambient air quality monitoring stations (CAAQMS) was installed in September 2024 at Indore.** This increased the national total to 551 stations.
